

Crisis Family Assistant: main flows

Sequence diagrams of the main flows. Participants use the names and domain colors of the system design diagram.

01 Official alert: family path

An official alert reaches every household in the affected county and opens the family crisis screens.

03 Household alarm

A household member sends their own alarm (gathering, safe, need help) to the rest of the household.

05 Roll call and child status

Teachers report their class from the shelter; the director and linked parents see the result after refreshing.

07 School setup and guardian linking

The school imports students and guardians; parents with a matching verified number confirm the link in the family app.

09 Assistant (RAG)

The assistant answers preparation questions only from official guides and always shows the source.

02 Official alert: school path

The same alert automatically opens sessions in schools that have lessons now, alerts staff and informs guardians.

04 Statuses and locations

Members set their status and share location during crisis mode. Nothing is pushed; others see it after refreshing.

06 Follow-up message and end of session

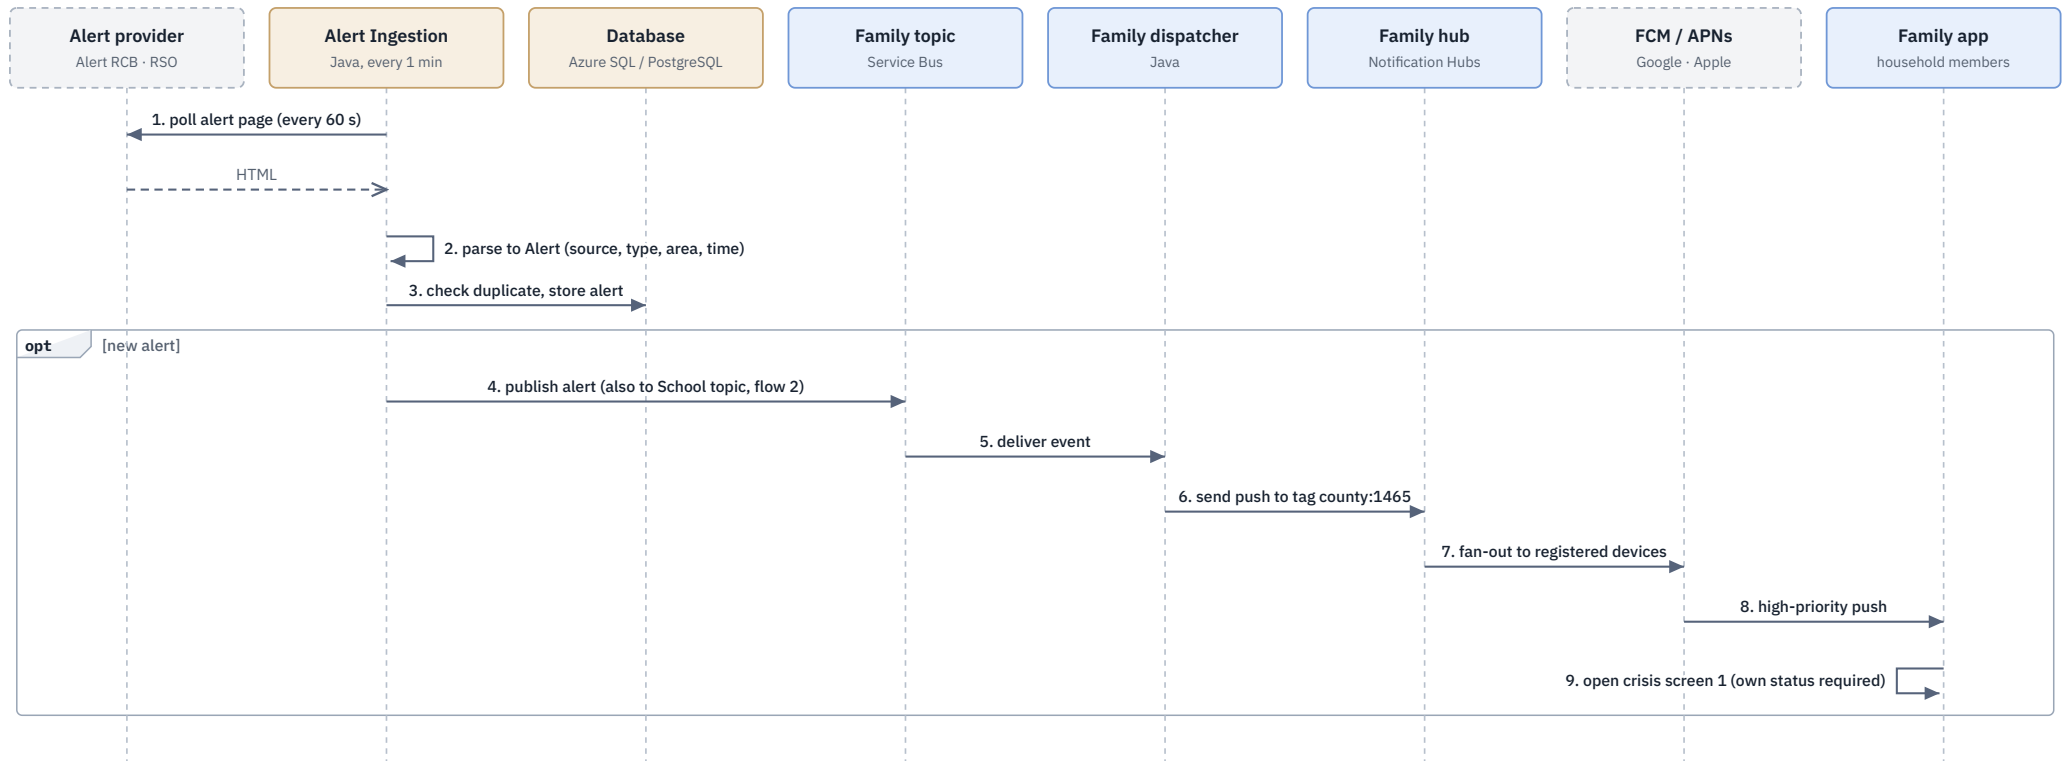

The communication person or director sends a templated message; delivery status is collected for the reach report.

08 Sign-in and device registration

All clients sign in with Entra External ID; each BFF validates tokens and registers devices in its hub.

Official alert: family path

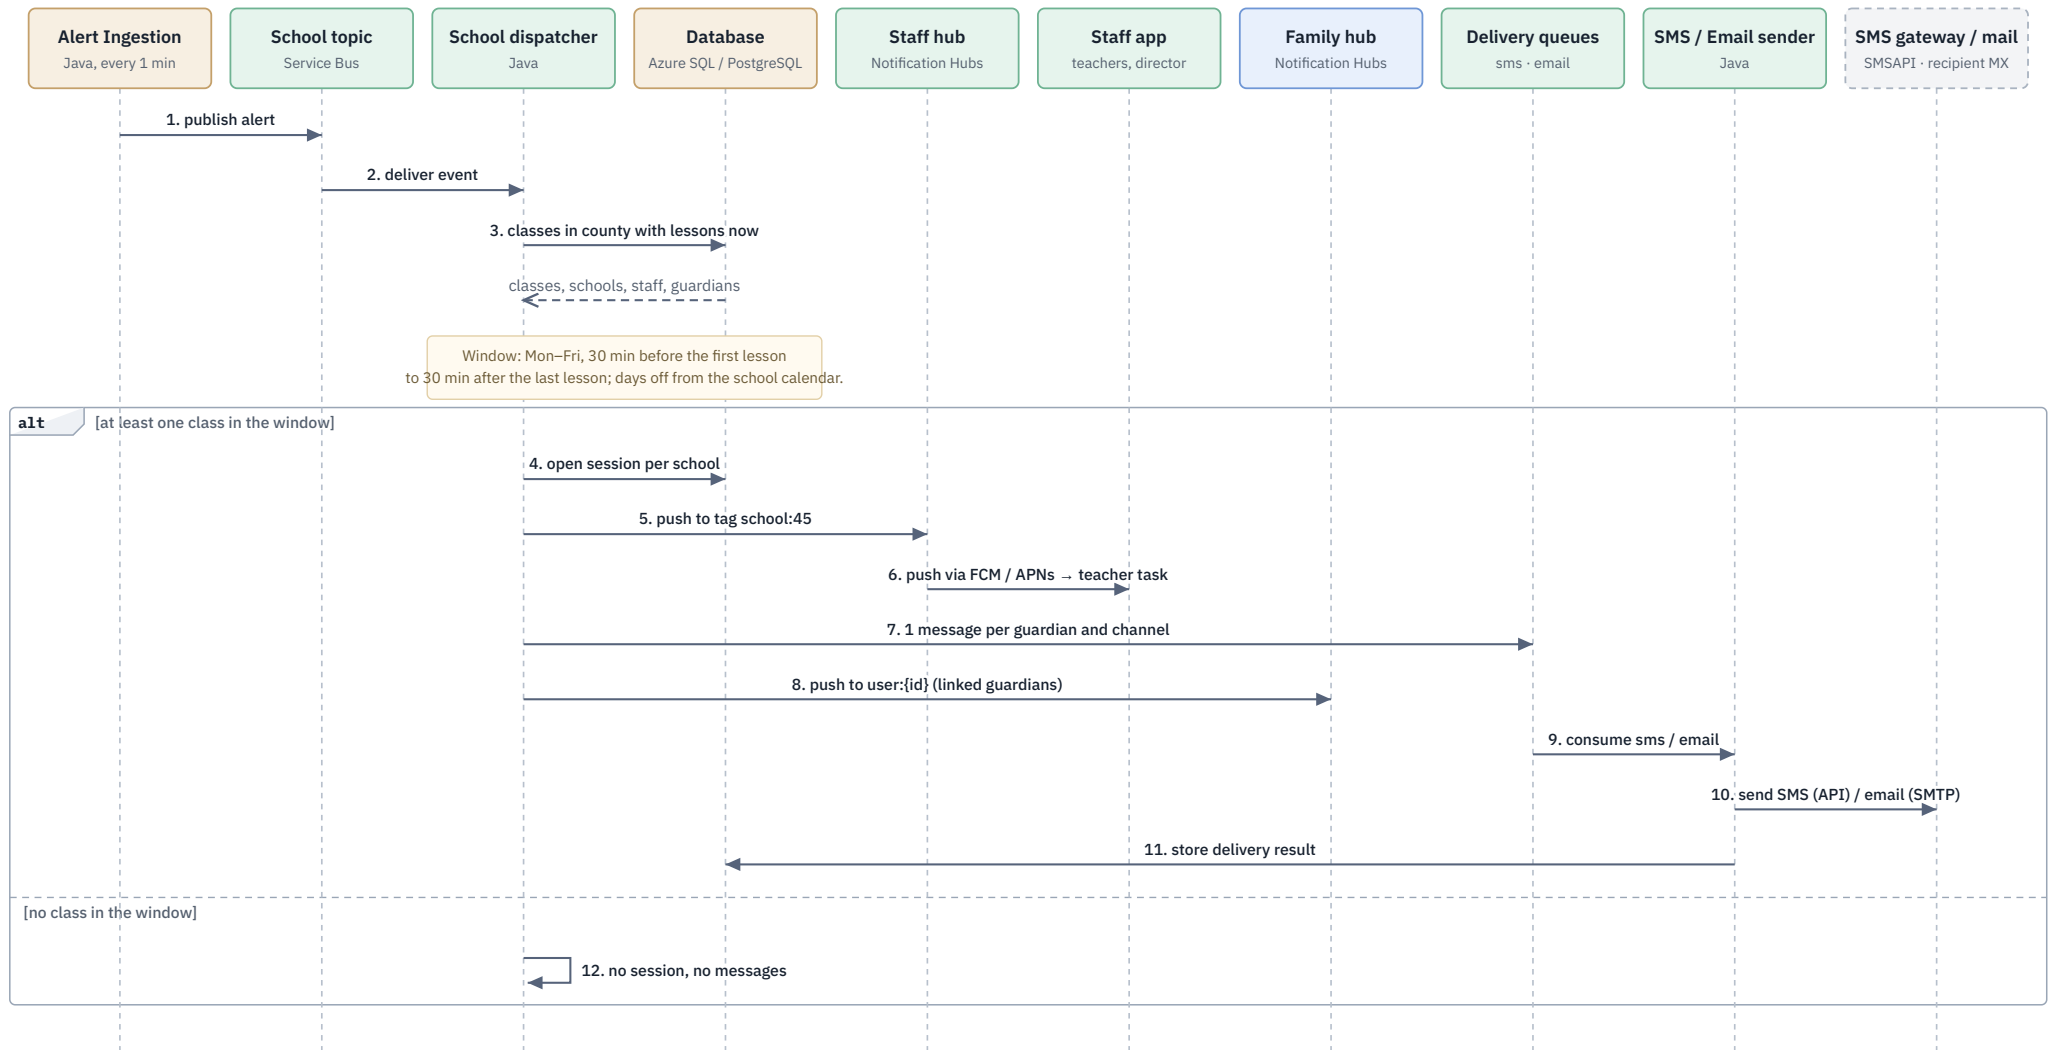

An official alert reaches every household in the affected county and opens the family crisis screens.

- The alert is stored before it is published, so a restarted ingestion never sends the same alert twice.
- Only one scheduler instance polls the providers (lock in the database or Redis).
- iOS: high-priority push until Apple approves Critical Alerts.

Official alert: school path

The same alert automatically opens sessions in schools that have lessons now, alerts staff and informs guardians.

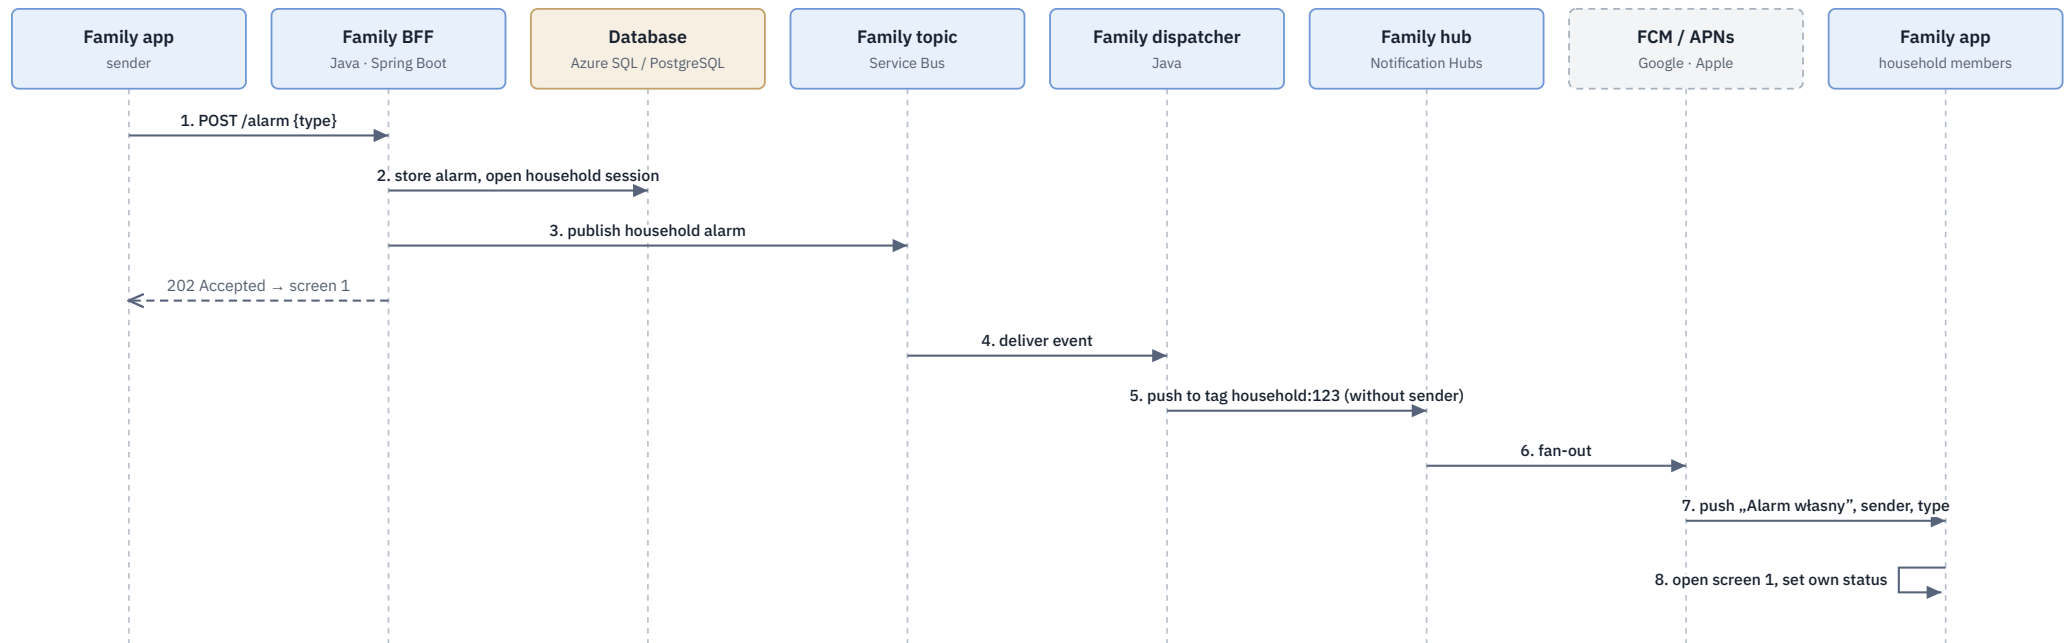

- Idempotency key alert + guardian + channel: one SMS per guardian even with siblings in several classes.

- SMS delivery reports come back through the gateway webhook (flow 6).

- Drill sessions run the same path with the drill flag and the „ĆWICZENIE” prefix.

Household alarm

A household member sends their own alarm (gathering, safe, need help) to the rest of the household.

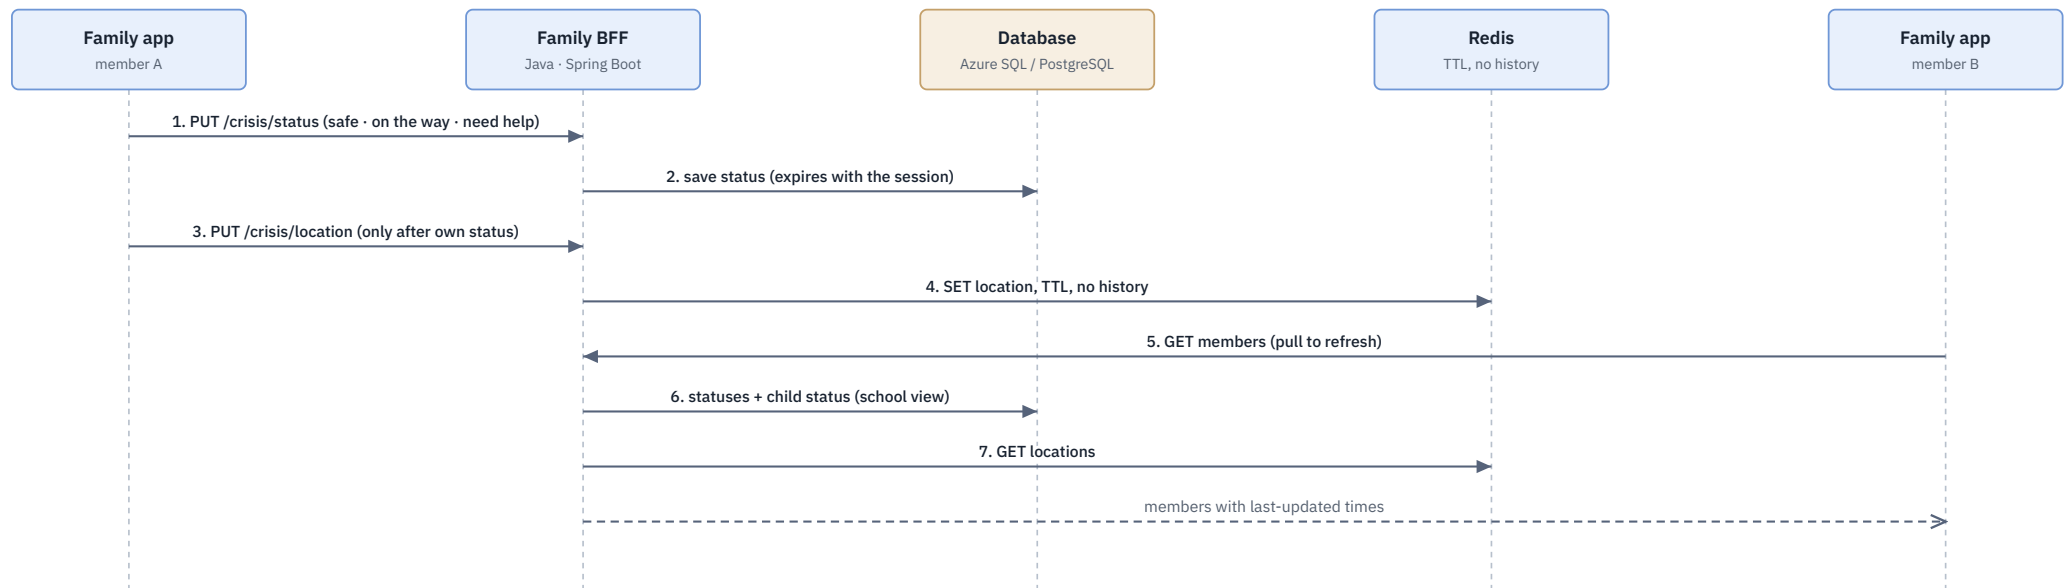

- The household alarm has its own color, icon and sound so it is never confused with an official alert.

- It is the only manual way to start crisis mode and the way to ask for urgent help.

Statuses and locations

Members set their status and share location during crisis mode. Nothing is pushed; others see it after refreshing.

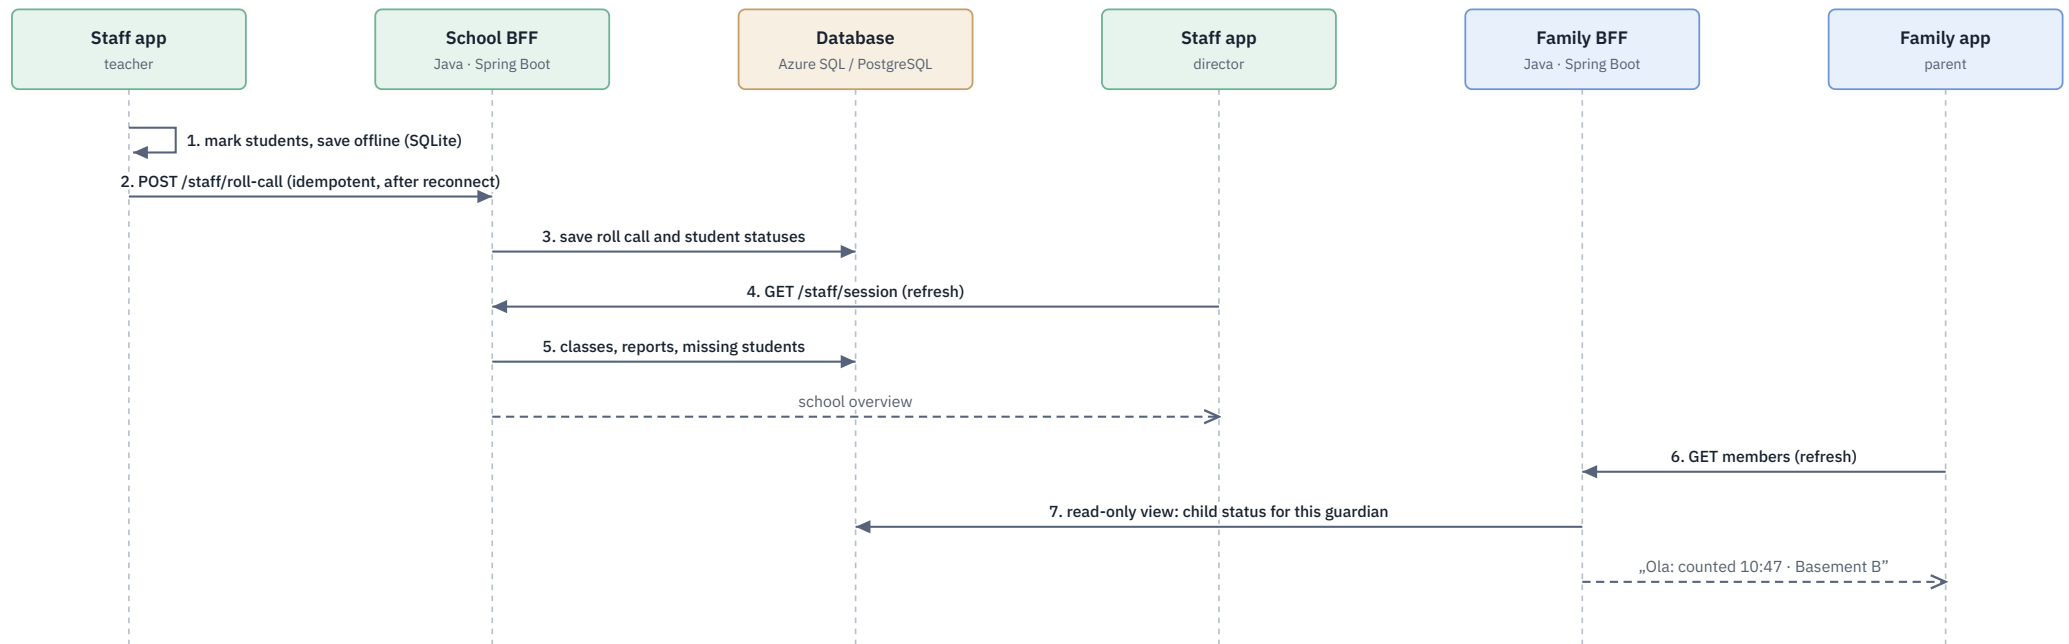

- Status changes do not publish events and do not send push notifications.

- Reciprocity: B sees others only after setting B's own status.

- Choosing „need help” suggests sending a household alarm (flow 3).

Roll call and child status

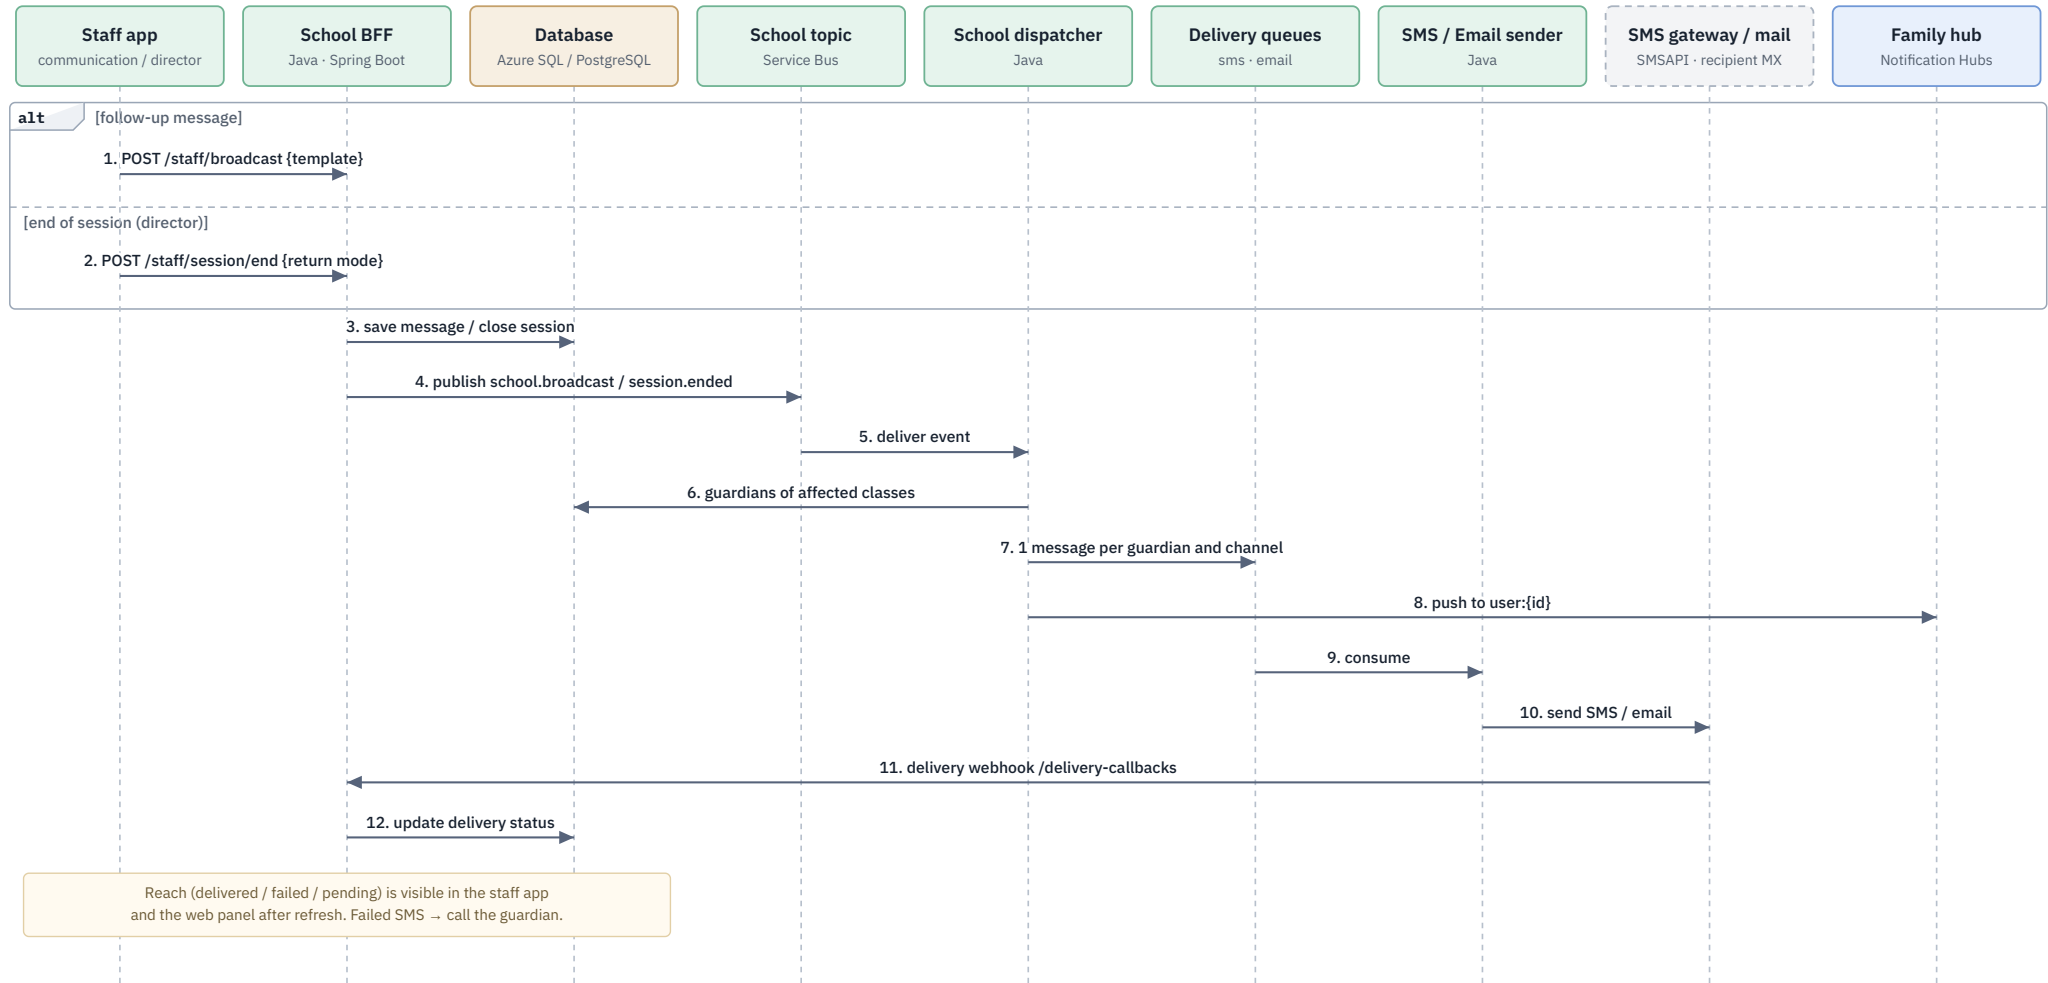

Teachers report their class from the shelter; the director and linked parents see the result after refreshing.

- Roll calls do not publish events and do not send push notifications.
- A teacher sees only the class they are teaching now; the director sees the whole school.
- A student reported by another class is removed from the missing list automatically.

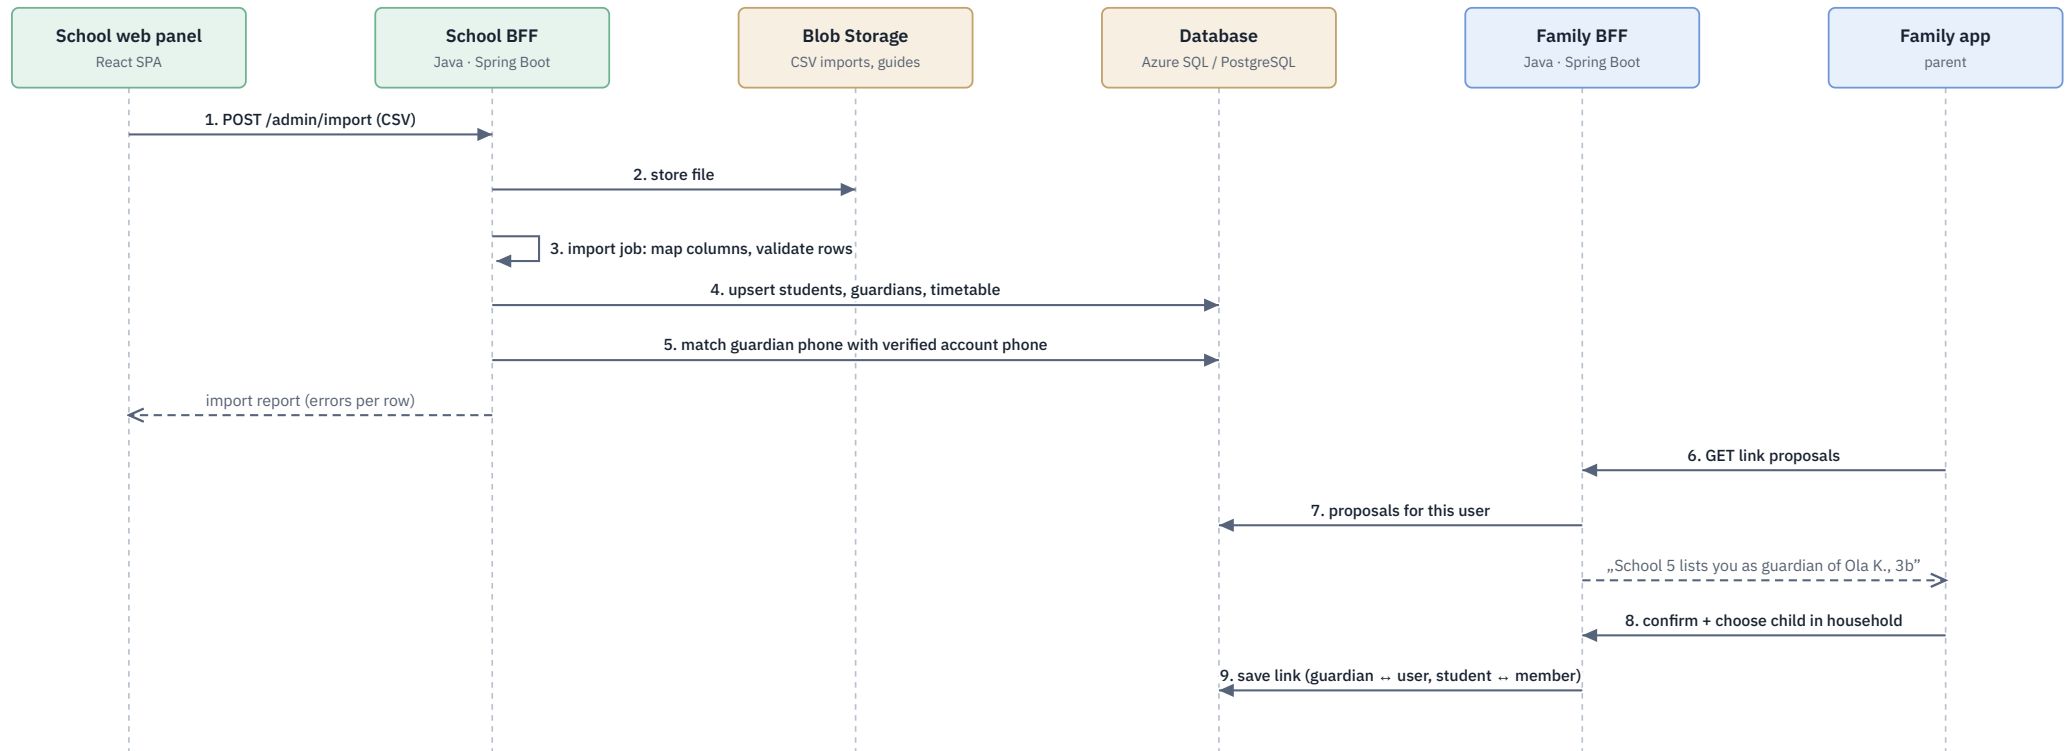

Follow-up message and end of session

The communication person or director sends a templated message; delivery status is collected for the reach report.

School setup and guardian linking

The school imports students and guardians; parents with a matching verified number confirm the link in the family app.

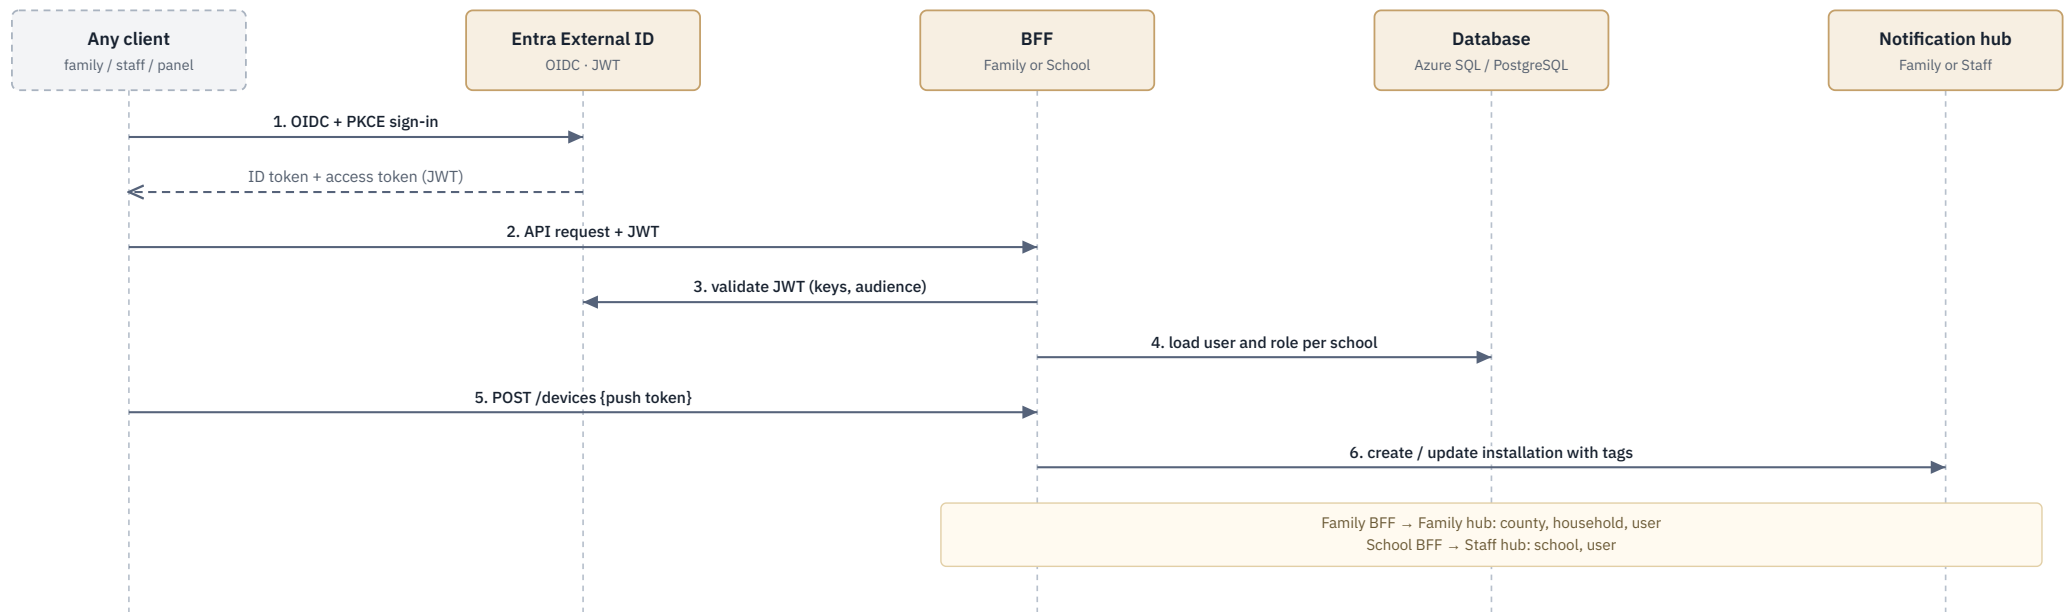

- Only phone numbers verified with an SMS code in the family app are matched.

- Without a link the guardian still gets SMS and email; the link adds push and the child status card.

Sign-in and device registration

All clients sign in with Entra External ID; each BFF validates tokens and registers devices in its hub.

Assistant (RAG)

The assistant answers preparation questions only from official guides and always shows the source.
